# Interagency Coordinating Committee Minutes of Meeting No. 6 September 18, 1984

Groundwater Quality Management Plan San Fernando Valley Basin (GWQMP-SFVB)

The sixth meeting of the Interagency Coordinating Committee was held on Tuesday, September 18, 1984 in Room 1547 of the Los Angeles Department of Water and Power's General Office Building. The meeting was called to order at 9:30 A.M. by Chairman, Laurent McReynolds. An attendance list is attached (Attachment 1). The minutes of the July 24, 1984 meeting were approved without comments. Reports were heard from each chairperson of the eight ICC subcommittees and summarized below.

#### Public Educations - Miriam Gensemer

The Public Education Program has thus far directed its emphasis on educating the commercial/industrial group on the safe handling and disposal of hazardous waste materials. The Department of Water and Power (DWP) has developed a slide presentation which upon request can be made available to interested agencies after a standard script is completed.

Regarding information distribution, SCAG has developed a fact sheet and published an article in their newsletter FORUM on hazardous waste management, the City of Burbank plans to publish a similar article in their bimonthly newsletter, and the DWP has prepared a brochure addressing the issue of hazardous waste disposal.

M. Gensemer reviewed the practices of other agencies outside of Los Angeles County that address the problems of handling small quantities of hazardous waste generated in residential areas. The findings of these studies could eventually be applied to the San Fernando Valley area. The Bureau of Sanitation was asked to determine and make available a call-in number for residential customers with information on how to dispose of hazardous waste materials.

A forum was proposed to encourage the sharing of ideas and experiences among agencies relating to the disposal substorage of hazardous wastes. Since the Los Angeles County Health Department has scheduled a forum for sometime in November, the subcommittee suggested to the Committee that another forum be held in the spring (tentatively April, 1985) when results of various studies will be available.

#### Regulation of Private Disposal Systems - Robert Van Ark

The current status of the City's regulation of private disposal systems was summarized. An ordinance to have the owners

of private disposal systems in the industrial/commercial areas connected to the public sewer systems may be effective by January 1985. Design of the first project in the San Fernando Valley is 75% complete. A total of 20 projects are planned over the next three years. Completion of all projects is estimated at 5 years. Since the connection of private disposal systems to the public sewers creates a considerable amount of cost to the owners, SCAG was asked and agreed to coordinate with the Bureau of Sanitation to educate this group on the need for sewer hook-up.

R. Navarro, representing the City of San Fernando, estimated that 2% of their industrial area especially around the airport still need to be sewered.

#### Augumented Enforcement Program - James King

J. King reported that a slide presentation on the history of the groundwater study and the small quantity generators of hazardous waste materials was given by T. W. Gibson before the subcommittee. The initial results of the small quantity hazardous waste generator survey were reviewed, although it was emphasized that these results were very preliminary.

The County was asked to report on the progress of their hazardous waste study program. Since a status report was unavailable, L. McReynolds requested a report by the next ICC meeting.

#### Regulation of Storage Tanks, Pipelines Sumps - Carl Sjoberg

The following bills will have impacts on the protection of groundwater quality:

- 1. SB 2193 on groundwater protection
- 2. AB 3447 on hazardous waste disposal
- 3. AB 3781 on underground storage tank monitoring
- C. Sjoberg reported that as of September 17, all proposed underground tanks in LA County must have provisions for secondary containment before permits will be issued.

The Shear bill has been approved and the LA County guidelines regarding underground tanks, pipelines and sumps will be available by next week. The LA City guidelines on underground storage facilities will follow a week later. Concern was expressed about the ambiguity in the state regulation on underground storage tank that requires monitoring wells in an unconfined aquifer to be 200 feet deep or at groundwater level.

When a leak is detected in an underground storage tank, the County will inform the Water Resources Board to evaluate the impact. The Water Resources Board guidelines on regulations for underground tanks is still pending. At this time no agency has taken the lead on enforcement.

# Small Quantity Hazardous Waste Program - Miriam Gensemer, Reva Fabrikant

A study conducted by the SCS engineers and the Bureau of Sanitation identified approximately 1000 firms dealing with small quantities of hazardous wastes. The results at this time are considered very preliminary. R. Fabrikant of the Bureau of Sanitation reported on their survey in the North Hollywood area. The results indicated about 30% of the industries are generating hazardous wastes. As much as 20% of the industries surveyed had either moved or were out of business and were thus classified as non-generators. There appeared to be a general lack of knowledge on the safe handling of hazardous materials by the industries surveyed.

A small quantity generator survey form (A&B) which was used for the study was distributed at the meeting (Attachment 2). Some of the preliminary findings of the study revealed that:

- 1. amounts of waste generated varied from 0-15 gal/mo.
- 2. wastes were mostly stored in 55 gallon drums
- 3. some wastes are kept on-site for 3-5 years
- 4. neutralization was the ususal type of on-site treatment

Regulation of Landfills and Groundwater Monitoring Programs - Robert Haw (representing Mel Blevins)

Proposed Strathern Landfill

The status of monitoring wells in the vicinity of landfills was reviewed. During the drilling operation of a monitoring well in the Strathern Landfill, dichloroethylene was discovered in the water samples. As a result, three additional monitoring wells in this landfill will be drilled.

Sheldon-Arleta Landfill

The drilling operation of four monitoring wells has been completed. Two dry monitoring wells were drilled near the Tujunga spreading grounds to monitor any possible migration of water from the spreading ground to the landfill.

#### Hewlitt Landfill

Three wells are scheduled for monitoring near the Hewlitt landfill. If the quality of water from these monitoring wells shows no signs of contamination, the DWP will drill as many as 20 production wells in the area. A schematic map showing the location of observation wells was distributed (Attachment 3).

Groundwater Monitoring Plan for Organic Chemicals (AB1803)

Regarding the groundwater monitoring program, A. Karimi of the DWP Water Quality Division reviewed the status of a plan prepared for the monitoring of groundwater in the San Fernando Basin for organic chemicals. In this plan 24 wells selected for the monitoring program will be analyzed for VOA, Base/Neutral, Acid extractables and pesticides contamination.

#### Aquifer and Groundwater Management - Laurent McReynolds

The status of the aeration tower for the treatment of volatile organics of groundwater in the San Fernando Valley was reviewed. A permit has been obtained from the South Coast AQMD to operate the unit. An alternative to the aeration tower is an ozone-ultraviolet combination treatment known as TOXOX which eliminates the air pollution problem by oxidizing the organic contaminants while in solution. The treatment process can also be applied to the air being stripped from an aeration tower to destroy the TCE. The DWP Water Quality Division is evaluating the possibility of utilizing this process for groundwater treatment or to treat the stripped air from an areation tower.

The next meeting is scheduled for Tuesday, November 20, 1984 at 9:30 AM. The Committee will meet in Room 1547 of the Los Angeles Department of Water and Power's General Office Building.
